SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: Written informed consent was obtained from all patients before the start of the study.
IRB: This study was approved by the Institutional Ethics Committee of Zhongshan Hospital, Fudan University, and was conducted in accordance with the Declaration of Helsinki. Pulmonary Surgery Surgical approach was determined by the thoracic surgeons based on the localization of the identified lesions and the principle of achieving an R0 resection.
Inclusion and Exclusion Criteria
Inclusion criteria of this study were as follows: the pulmonary lesions were accessed to be metastases from CRC and confirmed by at least one pathologist, the LM was performed with curative intent.
Attrition
not detected.
Sex as a biological variable
The exclusion criteria included other extrahepatic metastases, palliative resection, previous history of other malignant tumors, mutation of BRAF, ablation or other palliative local treatment of the metastases, and prior LM received before the first visit.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.

Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Statistical Analysis Statistical analysis was processed via SPSS software version 22.0.	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)
The survival curve was plotted with GraphPad Prism software (Version 8.2.1).	GraphPad Prism		

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
The Chi-square test and Fishers exact test were used for categorical data.	Chi-square test
	Fishers exact test
Survival curves were estimated with Kaplan-Meier method and compared using Log rank test.	Log rank test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
