SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
1 Baseline patient characteristics Baseline patient characteristics and CV event rates were derived from a retrospective study that included a cohort of patients meeting the inclusion criteria of the FOURIER trial, 7 based on nationwide, linked Swedish population registry data.
Attrition
not required.
Sex as a biological variable
not detected.
Subject Demographics
Age: Patients were 72, 69, and 72 years old for the Recent MI, MI with a risk factor, and MI with a second event risk profiles, respectively.
Randomization
Compared with the statin-based CTTC meta-analysis, treatment with evolocumab had very similar effects on the risk of MACE per 1 mmolL of LDL-C reduction, as illustrated separately for years 0 to 1 and years 1 to 2. 7 Furthermore, the results from the FOURIER trial are consistent with the results of a recent Mendelian randomization study showing that variants in the genes encoding PCSK9 and 3-hydroxy-3-methylglutaryl-coenzyme A reductase (the target of statins) were associated with nearly identical effects on the risk of CV events per unit decrease of LDL-C.
Blinding
not detected.
Power Analysis
not detected.
Replication

not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
7 The model was developed using Microsoft Excel (2019) and comprised six main health states (Supplementary material online, Figure S1): non-fatal MI non-fatal IS post-MI post-IS CV death and non-CV death.	Microsoft Excel		Suggestion: Microsoft Excel, RRID:SCR_016137(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
