SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: The experimental protocol was approved by the Institutional Review Board of the Yonsei University Dental Hospital (2-2012-0001 and 2-2015-0005).
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: Materials and methods Samples and RNA isolation Healthy gingival tissues were obtained during extraction of the supernumerary tooth and odontoma and flap surgeries from nine patients aged 7-12 years.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
Samples of 25 ml containing 1 x Universal TaqMan Master Mix (4,369,016 Applied Biosystems) , PCR primers at a concentration of 0.9 mM , and the diluted cDNA were prepared in triplicate.
Number: Samples of 25 ml containing 1 x Universal TaqMan Master Mix (4,369,016 Applied Biosystems) , PCR primers at a concentration of 0.9 mM , and the diluted cDNA were prepared in triplicate.

Data Information	
Identifiers: Analysis of cDNA microarray data To compare gene expression between gingival and dental pulp tissues, we analyzed public microarray data (GSE58480, gingival data GSE75644, dental pulp data) published on the Gene Expression Omnibus	GSE58480
	GSE75644

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Analysis of cDNA microarray data To compare gene expression between gingival and dental pulp tissues, we analyzed public microarray data (GSE58480, gingival data GSE75644, dental pulp data) published on the Gene Expression Omnibus	Gene Expression Omnibus		Suggestion: Gene Expression Omnibus (GEO) (RRID:SCR_005012)(link)
The web-based tool DAVID (the Database for Annotation , Visualization , and Integrated Discovery) was used to analyze the biological characteristics of differentially expressed genes .	DAVID		Suggestion: DAVID (RRID:SCR_001881)(link)
Then , these genes were classified based on gene functions in Gene Ontology and KEGG Pathway databases . 18 , 19 Quantitative reverse transcriptase-polymerase chain reaction The single-stranded cDNA required for PCR analysis was produced using 500 ng of extracted total RNA as a template for reverse transcription (Superscript III Reverse Transcriptase and random primer Invitrogen , Paisley , UK) .	KEGG		
All analyses were performed using 25.0 SPSS software (SPSS Inc., Chicago, IL, USA).	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
The normality of the RMA expression values was confirmed through the Shapiro-Wilk test (p-values > 0.05).	Shapiro-Wilk test
To determine whether genes were differentially expressed between the gingival and dental pulp tissue, we conducted t-tests for gene expression values.	t-tests
We considered inflated alpha error due to multiple testing by applying a false discovery rate method (Benjamini and Hochberg, 1995).	Benjamini and Hochberg

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
