SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: KPNC membership is highly representative of the local and statewide population with respect to age, sex, raceethnicity, and socioeconomic status. 24 , 25 , 26 This study was approved by the KPNC institutional review board, and a waiver of informed consent was obtained due to the nature of the study.
Consent: KPNC membership is highly representative of the local and statewide population with respect to age, sex, raceethnicity, and socioeconomic status. 24 , 25 , 26 This study was approved by the KPNC institutional review board, and a waiver of informed consent was obtained due to the nature of the study.
Inclusion and Exclusion Criteria
Patients were excluded who had unknown sex, <12 months of prior membership or drug benefit, a known noncardiovascular life-limiting diagnosis (ie, metastatic cancer, receiving chronic dialysis, andor liver cirrhosis), prior organ transplant, or no outpatient triglyceride measured within 2 years before the index date.
Attrition
Two of the authors (A.P.A and A.S.G.) take full responsibility for the articles integrity and had complete control and authority over its preparation and the decision to publish.
Sex as a biological variable
not detected.
Subject Demographics
Age: Study Sample The study population included all health-plan members aged >=45 years who were receiving statin therapy, with a well-controlled LDL-C (ie, defined as 41-100 mgdL), and had >=1 ASCVD risk factors (ie, primary prevention cohort) or established ASCVD (ie, secondary prevention cohort) between January 1, 2010 and December 31, 2017.
Randomization
not detected.
Blinding
not detected.
Power Analysis

not detected.
Replication
not required.
Cell Line Authentication
Authentication: 29 , 30 , 31 , 32 , 33 , 34 These diagnostic and procedural codes for end points resulting in hospitalization have been validated in multiple healthcare delivery systems, and previous studies have demonstrated a positive predictive value of >=95 when compared against the gold standard of manual chart review and adjudication by a board-certified physician using clinical criteria.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Death was comprehensively identified from health-plan administrative databases, hospitalization and billing claims databases, state death certificate files, and Social Security Administration vital status files using previously described methods. 29 , 35 Statistical Analysis All analyses were performed using SAS software version 9.4 (SAS Institute, Cary, NC), and the analyses are described separately for the primary and secondary prevention cohorts.	SAS		
	SAS Institute		Suggestion: Statistical Analysis System, RRID:SCR_008567(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Descriptive characteristics were compared using ANOVA or Wilcoxon rank sum test for continuous variables and kh2 test for categorical variables.	ANOVA
	Wilcoxon rank sum test
After confirming no violation in the proportional hazards assumption using visual inspection of the Martingale residuals and the Kolmogorov-Smirnov test, multivariable Cox regression models were performed to examine the independent association between triglyceride and each of the outcomes of interest.	Kolmogorov-Smirnov test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
