Document Identifier: **PMC8751965**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: Ethics In Denmark, registry-based studies that are conducted for the sole purpose of statistics and scientific research do not require ethical approval or informed consent by law.
Inclusion and Exclusion Criteria
Patients with concomitant diagnosis or surgery codes not corresponding to ToF were excluded from this study to further increase the validity of the diagnosis.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: Associated anomalies, comorbidities, and presence of cardiac implantable electronic devices were assessed at 1, 10, and 20 years of age among patients and controls who were alive and had follow-up to these time points (Table 1)
Randomization
The diagnosis was validated by the authors by examination of 150 random records of patients with ToF with a positive predictive value of 98%.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.
Cell Line Authentication

Authentication: For this study, data from the following 2 nationwide administrative registries were obtained: (1) the Danish National Patient Registry, which holds information on all hospital admissions and outpatient contacts from 1977 according to the International Classification of Diseases, Eighth Revision (ICD-8) and Tenth Revision (ICD-10) and surgical procedures according to the Nordic Medico-Statistical Committee Classification of Surgical Procedures (NCSP) 18 ; and (2) the Danish National Population Registry, which contains information on birth date, sex, and vital status (ie, whether a person is alive and resident in Denmark, disappeared [persons whose residence is unknown to Danish authorities], emigrated, or dead—along with the date of these events). 19 The Danish registries are validated and of high quality as described in detail previously.

Data Information

Availability: METHODS Data Sources Anonymized data were made available from Statistics Denmark, and permission from Statistics Denmark is necessary to access data.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
All statistical analyses were performed with SAS statistical software (version 9.4, SAS Institute, Cary, NC).	SAS		
	SAS Institute		Suggestion: Statistical Analysis System, RRID:SCR_008567(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
The cumulative incidences of IE according to groups were estimated using the Aalen-Johansen estimator incorporating the competing risk of death, and differences between groups were assessed using Gray's test.	Gray's test
24 The cumulative incidences of all-cause mortality according to groups were estimated using the Kaplan-Meier estimator, and differences between groups were assessed using the log-rank test.	log-rank test
The proportional hazards assumption was tested and found valid in the adjusted time-dependent Cox regression analysis, and similar HRs were found in a landmark analysis dividing follow-up into 2 periods from 0 to 1 and >1 year of age.	Cox regression

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
