Document Identifier: **PMC8760989**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IACUC: Materials and Methods Patient Screening, Enrollment, and Clinical Examination Application of the study was submitted to the Ethical Review Committee of Peking University Peoples Hospital (No.2016PHB202-01) and the CAP cohort was registered at ClinicalTrials.gov (NCT03093220).
Consent: The study was conducted under the principles of the Helsinki Declaration and patient informed consent was obtained from all participators or their next of kin for incapacitated patients or unconscious subjects who were unable to give informed consents.
Inclusion and Exclusion Criteria
Possible contaminants were excluded from the present analysis using the R Decontam package.
Attrition
Twenty-nine patients with CTD-ILD were admitted to Peking University Peoples Hospital and thirty healthy volunteers from the medical center were recruited.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication

not required.	
Protocol Information	
Identifiers: Materials and Methods Patient Screening, Enrollment, and Clinical Examination Application of the study was submitted to the Ethical Review Committee of Peking University Peoples Hospital (No.2016PHB202-01) and the CAP cohort was registered at ClinicalTrials.gov (NCT03093220).	NCT03093220

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
16S rRNA Gene Sequencing Analysis Paired-end reads were merged and quality filtering , trimming and dereplication of the raw tags were performed under specific conditions to obtain the high-quality clean reads using VSEARCH.	VSEARCH		Suggestion: VSEARCH (RRID:SCR_024494)(link)
17 Chimeric sequences were detected by aligning clean reads to the Silva database (v.132)18 with the UCHIME algorithm .	Silva		Suggestion: SILVA (RRID:SCR_006423)(link)
Taxonomy assignment was performed on ASVs using USEARCH (v10) against the RDP database (v 11.5)19 and Greengenes database.	USEARCH		
	Greengenes		Suggestion: Greengenes (RRID:SCR_002830)(link)
Statistically significant bacterial differences (LDA > 2 , P < 0.05) associated with different groups were explored using linear discriminant analysis (LDA) effect size (LEfSe) .	LEfSe		Suggestion: LEfSe (RRID:SCR_014609)(link)
Data were normalized by the QC group and then auto-scaled using MetaboAnalystR 3.0.26 The normalized data were used for downstream analysis .	MetaboAnalystR		
Principal component analysis (PCA) and orthogonal projections to latent structures discriminant analysis (OPLS-DA) were conducted using SIMCA v14.1 (Umetrics , Sweden)	SIMCA		
DIABLO function from the mixOmics v6.6.2 R package27,28 was used to generate integrated metagenomic and metabolomic signatures.	mixOmics		

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Beta diversity was assessed by permutational multivariate analysis of variance (PERMANOVA) and ANOSIM based on Bray-Curtis distances .	PERMANOVA
Students t-test or analysis of variance (ANOVA) with post-hoc Tukey HSD test were used to analyze continuous parametric data, whereas continuous nonparametric data were analyzed using Mann-Whitney U or a Kruskal-Wallis test.	Students t-test
	analysis of variance
	ANOVA
	Tukey HSD test
	Mann-Whitney U
	Kruskal-Wallis test
All categorical data were analyzed using the chi-square or Fishers exact test.	chi-square
	Fishers exact test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
