Document Identifier: **PMC8762585**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Standard Protocol Approvals, Registrations, and Patient Consent Procedures This study was approved by the Johns Hopkins Medicine Institutional Review Board.
Consent: Written informed consent was obtained from all participants.
Inclusion and Exclusion Criteria
Participants were excluded from the analysis if they (1) had a history of other neurologic conditions affecting the brain, such as dementia (2) had an impaired level of consciousness or ongoing sedation (3) had uncorrected visual or hearing impairment (4) had a psychiatric condition other than an affective disorder (5) did not complete at least one test in a battery of neglect tests (6) did not complete a diffusion-weighted imaging (DWI) MRI or (7) had bilateral stroke or a stroke of the cerebellum, medulla, or pons.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication

not required.	
Data Information	
Availability: Anonymized data pertaining to the research presented will be made available by request from qualified investigators.	
Identifiers: DWI data were acquired axially with slice thickness 4 mm with no gaps, 3 directions, TRTE 5,00078 ms, flip angle 90deg, field of view 256 x 256 and b = 1,000 smm2.	5,00078

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
This step was performed using the software NiiStat (github.comneurolabuscNiiStat), which leverages routines from the software package SPM software (fil.ion.ucl.ac.ukspm).	SPM		Suggestion: SPM (RRID:SCR_007037)(link)
NiiStat is an in-house MATLAB program, which includes routines for enantiomorphic normalization in accordance with Nachev et al. 19 In brief, the enantiomorphic normalization enables accurate normalization to standard Montreal Neurological Institute (MNI) space by filling the parts of brain with lesions with data from the spared contralateral hemisphere.	NiiStat		Suggestion: NiiStat (RRID:SCR_014152)(link)
These steps were performed using in-house routines written in MATLAB.	MATLAB		Suggestion: MATLAB, RRID:SCR_001622(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
