SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IACUC: All experimental procedures were approved by The University of Alabama at Birmingham (UAB) Institutional Animal Care and Use Committee.
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
Retina Preparation Methods were based on those used by Strang et al.12 Male and female New Zealand albino rabbits (1.6 to 4.2 kg) were dark adapted and anesthetized after which the eyes were enucleated in dim red light and the animal euthanized.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Spikes were extracted from the analog recordings by thresholding template convolved traces using programs, then integrated, graphed, and analyzed in MATLAB (MathWorks, Natick, MA).	MATLAB		Suggestion: MATLAB, RRID:SCR_001622(link)
Statistical Analysis Data were imported into GraphPad Prism 9 to assess the overall and bin by bin statistical differences in cross-correlations between conditions.	GraphPad		Suggestion: GraphPad Prism, RRID:SCR_002798(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Two-way ANOVAs (Alpha was set at 0.05 for significance) were used to compare statistical differences between pre-, during-, and post-epochs for each data run (GraphPad Prism 9, La Jolla, Ca), followed by Tukeys multiple comparison of simple row effects analyzed bin by bin (20 msec).	ANOVAs

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
