SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: The respondents were given an informed consent and a notification that the results of this voluntary study would be used for research purposes.
IRB: This study was approved by the Health Research Ethics Committee of Universitas Padjadjaran, Indonesia (registration number: 1050UN.6.KEPEC2020) and conducted in accordance with the Declaration of Helsinki.
Inclusion and Exclusion Criteria
Specifically, an online questionnaire was delivered to participants who met the major inclusion criteria of parents should have at least one child.
Attrition
not detected.
Sex as a biological variable
In this analysis, nominal scales were transformed into dummy variables by using the codes of 0 and 1, including gender (male = 1, female = 0), age (<38 = 1, >=38 = 0), education (university = 1, senior high school = 0), occupation (employed = 1, unemployed = 0), and having a child in kindergarten or primary school (yes = 1, no = 0).
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
not detected.
Power Analysis
The sample size was calculated to be 96 respondents.

Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
All analyses were conducted by using SPSS 27 (SPSS Inc., Chicago, IL, USA).	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Correlations between parents knowledge, attitudes and practice, and respondents characteristics were investigated by using t-test.	t-test
In particular, a pairwise Pearsons correlation coefficient was also taken into account.	Pearsons correlation
29 To confirm that there was no multicollinearity, we applied the tolerance level for all variables and the variation inflation factor (VIF) at 0.70-0.99 and 1.02-1.42, respectively.29,30 In addition, we applied a regression test that showed p-value at <0.001, the mean of the residual standard at 0, and the range of the residual standard at below +-3, which indicated no outlier.	regression test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
