Document Identifier: **PMC8785202**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
In cases with collinearity, the variable that had the best performance in the model (tested with the likelihood ratio) was included, and in general, variables with only a few events were excluded.
Attrition
not required.
Sex as a biological variable
16 Data on sex, age, smoking status (current or former smoker), alcohol consumption (above the national limit of >=7 unitweekwomen and >=14 unitsweekmen), body mass index, length of hospital stay and medical treatment were obtained from the electronic medical record.
Subject Demographics
Age: not required.
Weight: not required.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
STATA IC V.16 (StataCorp) was used for the analyses.	StataCorp		Suggestion: Stata, RRID:SCR_012763(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Statistics Baseline characteristics were presented as number and percentage for categorical data and median and 25th to 75th percentiles (IQR) for continuous data since the normality assumption was not met (tested with the Shapiro-Wilks test and visualised with QQ plot).	Shapiro-Wilks test
To compare baseline characteristics, the kh2-test was used for categorical variables, and the Mann-Whitney U test was used to compare continuous data.	Mann-Whitney U test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
