SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics	
not required.	
Inclusion and Exclusion Criteria	
not required.	
Attrition	
not required.	
Sex as a biological variable	
not required.	
Subject Demographics	
Age: not required.	
Weight: not required.	
Randomization	
not detected.	
Blinding	
not detected.	
Power Analysis	
not detected.	
Replication	
not required.	
Data Information	
Identifiers: We also selected gene expression profiles of patient-derived ESCC tissue (GSE53625 , GPL18109 , n=358) and EAC tissue	GSE53625
	GSE19417

(GSE19417 , GPL4372 , n=76) from the GEO database to validate the candidate prognostic genes identified from TCGA data .	

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Genes that were differentially expressed between the 2 groups were screened using the Bioconductor limma package (https:bioconductor . orgpackagesreleasebiochtmllimma . html) in R v3.6.3 software , with a threshold of P<0.05 and fold change>1 .	limma		Suggestion: LIMMA (RRID:SCR_010943)(link)
Functional enrichment analysis The Bioconductor clusterProfiler 3.8 , enrichplot 3.8 , and Rlease ggplot2 3.1.1 packages of R software were used to evaluate functional enrichment of identified DEGs .	clusterProfiler		Suggestion: clusterProfiler (RRID:SCR_016884)(link)
	ggplot2		Suggestion: ggplot2 (RRID:SCR_014601)(link)
KEGG) pathway analysis was performed to identify relevant pathways and Gene Ontology (GO) analysis encompassing biological process (BP) , cell composition (CC) , and molecular function (MF) was carried out to determine the functions of DEGs .	KEGG		
Protein-protein interaction (PPI) network construction PPI networks were constructed by mapping DEGs using Search Tool for the Retrieval of Interacting GenesProteins (STRING) database v11.0 (http:string-db . org) (29) .	STRING		
We imported the PPI networks into Cytoscape software (https:cytoscape.org) , and the top 3 significant modules for ESCC and EAC were identified using the MCODE algorithm in Cytoscape.	Cytoscape		Suggestion: Cytoscape (RRID:SCR_003032)(link)
	https:cytoscape.org		
Gene set enrichment analysis (GSEA) GSEA was performed using TCGA cohort to identify pathways that were most relevant to prognostic DEGs in ESCC and EAC (31).	Gene set enrichment analysis		
DEG and functional pathway enrichment analyses were performed using the Bioconductor package in R.	Bioconductor		Suggestion: Bioconductor (RRID:SCR_006442)(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Statistical analysis Nonparametric tests (Wilcox test for 2 groups and Kruskal-Wallis test for >=3 groups) were used to assess correlations between stromalimmune scores and clinicopathologic parameters.	Wilcox test
	Kruskal-Wallis test
Kaplan-Meier survival analysis and the log-rank test were used to evaluate the relationships between ESTIMATE scores, levels of DEGs and TIICs, and prognosis.	log-rank test
Correlations between gene expression levels were evaluated using Spearmans rank correlation coefficient.	Spearmans rank correlation

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
