SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not detected.
Inclusion and Exclusion Criteria
2.7 Sample restrictions and missing data imputation We excluded some WLS members from our analyses (Fig. 2).
Attrition
Of the 19,050 graduates and siblings, we excluded 1947 who were not linked to the 1940 census.
Sex as a biological variable
We also adjusted our statistical models for gender (male or female) and age at the 2004 survey.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
One-third of high school seniors in the state of Wisconsin in 1957 (N = 10,317) were randomly recruited into the WLS cohort.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Experimental Models: Organisms/Strains			
We did not adjust for race or ethnicity in any model because nearly all WLS respondents were non-Hispanic White, reflecting the composition of Wisconsin high school graduates in 1957 (Herd et al., 2014).	non-Hispanic White		

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Adolescent IQ was measured in 11th grade (age 16-17) using the Henmon-Nelson test, which assesses verbal and quantitative skills (Henmon & Nelson, 1954).	Henmon-Nelson test
We tested for statistically significant differences using t-tests for continuous variables or chi squared for categorical variables.	t-tests

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
