SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
not required.
Attrition
not required.
Sex as a biological variable
DHS is a nationally representative household survey that offers data from a wide variety of population, health, and nutrition tracking and effect assessment measures with face-to-face interviews of women aged 15 to 49.
Subject Demographics
Age: In each country, information was obtained from qualified women aged 15 to 49 years.
Randomization
Stratified, multi-stage, random sampling is used in the surveys.
Blinding
not detected.
Power Analysis
not detected.
Replication
Number: The response variable is binary, and it is coded as 1 if women received ANC from skilled healthcare providers (doctors, midwives, nurses, and health officers) at least four times and 0 otherwise.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
27 Data Processing and Management Data processing and analysis were performed using STATA 15 software.	STATA		Suggestion: Stata (RRID:SCR_012763)(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
In the first step, bi-variable analysis and cross-tabulations by Pearsons chi-squared test were used to examine if educational attainment was associated with ANC utilization.	chi-squared test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
