SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
The following inclusion and exclusion criteria was referred to while recruiting men for the study: Inclusion Criteria The men belonging to age range of 18 - 39 years who were in a heterosexual relationship at least for the last 6 months without history of medical, psychiatric, and hormonal disease and dysfunction, drug use including recreational drugs, obese and those not using hypertension and heart medications were included in the sample.
Attrition
not required.
Sex as a biological variable
Participants One hundred thirty-seven men with NOED were screened eligible and recruited to participate in the study out of total of 164 men referred to the principal investigator from sexual health clinics in South Punjab, Pakistan.
Subject Demographics
Age: The age of the participating men ranged from 18 - 38 years (M = 27 years for all groups).
Randomization
The current study employed the sequential, randomized clinical trial research design.
Blinding
Both the SC and placebo groups were single blinded whereas the CBST treatment group was not blinded.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
