SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: 14 This study was approved by the institutional review board of the National Cancer Center of China, and written informed consent was waived given retrospective nature of the study.
Consent: 14 This study was approved by the institutional review board of the National Cancer Center of China, and written informed consent was waived given retrospective nature of the study.
Inclusion and Exclusion Criteria
Those identified by death certificate or autopsy were excluded.
Attrition
not detected.
Sex as a biological variable
Patients were classified according to the Site Recode the International Classification of Diseases for Oncology, third edition (ICD-O-3) WHO 2008 guidelines, which identify cancers of all sitesorgan systems including cancers of the oral cavity and pharynx, digestive system, respiratory system, bones and joints, brain and other nervous system, breast, urinary tract, female reproductive system, male reproductive system, soft tissues including the heart, skin (excluding basal cell carcinoma and squamous cell carcinoma, endocrine system, eye and orbit, as well as mesothelioma, leukemia, lymphoma, Kaposi sarcoma, and miscellaneous.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.

Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
We considered patients to have died by suicide only if the COD to site record class in the SEER program was coded as suicide and self-inflicted injury.	SEER		Suggestion: SEER (RRID:SCR_015499)(link)
16 All statistical analyses were performed by the Surveillance Research Program, National Cancer Institute SEER*Stat software (seer.cancer.govseerstat) version 8.3.9 and R Statistical Software version 4.0.3 (R Foundation for Statistical Computing), without multiple comparison corrections as the analyses were exploratory.	R Statistical		Suggestion: R Project for Statistical Computing (RRID:SCR_001905)(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Changing trend of SMR and AER over year of diagnosis was tested by using Mann Kendall Trend Test.	Mann Kendall Trend Test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
