SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Cell migration assay or wound healing assay A549 and HOP62 cells were plated on 6-well plates in triplicates and after 24 hrs of siRNA transfections , wound were made using the pipette tip following replacement with fresh media .

Number: Cell migration assay or wound healing assay A549 and HOP62 cells were plated on 6-well plates in triplicates and after 24 hrs of siRNA transfections , wound were made using the pipette tip following replacement with fresh media .
Cell Line Authentication
Contamination: The cell lines were routinely tested for mycoplasma and subcultured every 3–4 days .

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
