SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: If a participant consented to participate , (s)he signed the consent form and the interview began .
Inclusion and Exclusion Criteria
24 25 Inclusion criteria were patients on the practice QOF Mental Health Register
Attrition
A literature review and consultation with two patient and public involvement (PPI) groups informed the interview topic guide and recruitment approach (online supplemental appendix 1).
Sex as a biological variable
not detected.
Subject Demographics
Age: (patients aged 18 years and over with schizophrenia , bipolar affective disorder and other psychoses) with comorbid asthma or COPD .
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Anonymised data were organised and analysed using NVivo software (V.12) and emergent themes were linked to coded data.	NVivo		Suggestion: NVivo (RRID:SCR_014802)(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
