SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Appropriate clearance from Institutional Ethical Board (RCHEC032020) was obtained for the study and was reviewed at the onset and at completion by the Board.
Inclusion and Exclusion Criteria
All patients who had clinical or biochemical evidence of lupus nephritis, C3 glomerulonephritis, hypocomplementemia, and IgA nephropathy were excluded.
Attrition
Three children were lost to follow-up owing to their inability for follow-up, and hence their response and outcome to therapy are not included in this descriptive study.
Sex as a biological variable
not detected.
Subject Demographics
Age: The mean duration of follow-up was 3.5 years (range 6 months to 4.5 years) with regular time-bound outdoor patient visits along with urine and blood chemistries.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
