SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: MATERIALS AND METHODS This case report was approved by the institutional review board at the University of Minnesota.
Consent: Written consent was obtained for this case report.
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
Case Report A 64-y-old male with compensated cirrhosis secondary to hepatitis C virus (HCV) and advanced HCC, with 3 lesions (2.0, 2.4, and 2.4 cm) along with a malignant portal vein (PV) thrombus, was referred for LT.
Subject Demographics
Age: Case Report A 64-y-old male with compensated cirrhosis secondary to hepatitis C virus (HCV) and advanced HCC, with 3 lesions (2.0, 2.4, and 2.4 cm) along with a malignant portal vein (PV) thrombus, was referred for LT.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
