SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: Three field investigators were trained over a period of 3 days at the health centre by the researcher for questionnaire-based interviewing of the participants in the community after taking their informed consent.
Field Sample Permit: The data was collected on tablets using kobotoolbox field data collection application and the study was completed over a period of 2 weeks.
IRB: The study was approved by the Institutional Ethics Committee of PGIMER, Chandigarh vide their letter no. INT/IEC/2017/195 dated 23/08/2017.
Inclusion and Exclusion Criteria
Inclusion criteria: Person residing in area which falls under the health cover of government primary health care facility for at least last 6 months and to whom an SMS has been sent through IHIS4PHC in the month of November and December 2018.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: The second type of messages were non-individualized targeted health promotion messages sent to various groups of patients such as all the hypertensives, diabetics, tobacco addicts, anaemic antenatal cases, and children under 5 years of age enrolled in the system.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.

Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
The data was analysed using descriptive statistics and Chi-square method for test of significance using statistical software STATA version 14.	STATA		Suggestion: Stata (RRID:SCR_012763)(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
The data was analysed using descriptive statistics and Chi-square method for test of significance using statistical software STATA version 14.	Chi-square method for test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
