SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
not required.
Attrition
not required.
Sex as a biological variable
not required.
Subject Demographics
Age: not required.
Weight: not required.
Randomization
not detected.
Blinding
Three investigators blinded to the cardiac MRI data analysed the same RV pressure sequences with the mean of their RVEF predictions regarded as the final value.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
From these event markers, the pressure intervals used for deriving Pmax from a distribution function (the 4-parameter Weibull peak fit) applied within the Dynamic Fit Wizard of SigmaPlot (version 13, Systat Software, Inc., San Jose, CA) were defined and a curve delineating Pmax calculated.	SigmaPlot		
These peaks were then used to define the up and down pressure segments (open circles) for prediction of Pmax, the maximal pressure achieved if the contraction remained isovolumic, as the intervals from half of the first peak (end-diastolic pressure or EDP) to the second peak (the first inflection point or Pi), and from the third peak (end-systolic pressure or ESP) to the fourth (end).	Pi		

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
