SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: MATERIALS AND METHODS Study design and participants The research project “Selected factors determining the failure to undertake physical activity in patients with MS in Poland” was approved by the Bioethics Committee functioning at the University of Rzeszów
Consent: pl portal suffering from MS. Criteria for exclusion from the study were as follows: no legal age and no consent to the study .
Field Sample Permit: Instrument and data collection The study was conducted using the Computer-Assisted Web Interview method , a direct interview technique collected via the Internet.
Inclusion and Exclusion Criteria
Criteria for inclusion in the study were as follows: an adult , registered as a user of the TacyJakJa .
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.

Replication
not required.

Table 2: Key Resources Table

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
