SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Materials and Methods Ethics approval Ethics approval was obtained from the Medical Faculties of the Universidad de Chile (approval 123-2012) and the Pontificia Universidad Catolica de Chile (11-159), and from Universidad de Tarapaca and University College London as described in Ruiz-Linares et al. (13).
Consent: Written informed consent was obtained from all study participants.
Inclusion and Exclusion Criteria
For the calling of ROH, variants with a minor allele frequency (MAF) under 5 and more than 3 missing genotypes across all individuals were excluded, leaving 593 740 SNPs for the subsequent ROH calling.
Attrition
not detected.
Sex as a biological variable
Study participants and associated sociodemographic data The study comprised 1786 individuals who were recruited from 2010 to 2013 39 of the study participants were women and the median age was 27 years.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication

Type: Intentional duplicates, samples with sex information inconsistent with genotype data and related individuals with shared identity by descent proportion >=0.25 were removed.
Number: Intentional duplicates, samples with sex information inconsistent with genotype data and related individuals with shared identity by descent proportion >=0.25 were removed.
Data Information
Availability: Structured questionnaires applied to volunteers of the aggregate-data are available upon request.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
The ADMIXTURE software (version 1.3) was used for supervised estimation of individual African, European, Northern Native Chilean and Southern Native Chilean ancestry components relying on reference individuals (37).	ADMIXTURE		Suggestion: ADMIXTURE (RRID:SCR_001263)(link)
ROH calling ROHs were called using the free, open-source whole genome association analysis toolset PLINK (version 1.07) (36).	PLINK		Suggestion: PLINK (RRID:SCR_001757)(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
