Document Identifier: **PMC8958374**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: The Ethics Committee on Biomedical Research approved this study under code 1442.
Inclusion and Exclusion Criteria
The exclusion criteria were patients with previous IFI.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: Data were collected from the electronic medical records of all patients aged <18 years who underwent AHSCT at the Fundacion Valle del Lili.
Weight: The regimen included intravenous voriconazole at a dose of 8 mgkg twice a day without a loading dose for children between 2 and 11 years old and adolescents aged 12-14 years with <50 kg body weight, or 4 mgkg twice a day for adolescents aged 12 to 14 years with >=50 kg body weight and all adolescents over 14 years 19, 20.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
The statistical software STATA 14 was used for the data analysis.	STATA		Suggestion: Stata (RRID:SCR_012763)(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Continuous variables are expressed as medians and interquartile ranges, and comparisons were performed using the Mann-Whitney test.	Mann-Whitney test
Categorical variables are expressed as proportions and compared using the chi-square or Fishers exact test, as appropriate.	chi-square
	Fishers exact test
The log-rank test was used to compare the cumulative incidence of IFI between the groups.	log-rank test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
