Document Identifier: **PMC8959684**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
not required.
Attrition
not required.
Sex as a biological variable
not required.
Subject Demographics
Age: not required.
Weight: not required.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
Each serum sample was tested in duplicate and the final results were read by a spectrophotometer (Sirio, SEAC, Florence, Italy) measuring the optical density (OD) at 450 nm.
Number: Each serum sample was tested in duplicate and the final results were read by a spectrophotometer (Sirio, SEAC, Florence, Italy) measuring the optical density (OD) at 450 nm.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Data obtained from the CReNBA analysis for the five inspected areas were normally distributed (Shapiro-Wilk test P < 0.05).	Shapiro-Wilk test
Two-way analysis of variance (ANOVA) was applied to compare the groups and the five areas.	analysis of variance
	ANOVA
Bonferronis test was applied for post-hoc comparison.	Bonferronis test
The Mann-Whitney test was applied to compare the prevalence of antibodies to the investigated bacteria and protozoa between the two groups.	Mann-Whitney test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
