SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Standard Protocol Approvals, Registrations, and Patient Consents Both studies were approved by an Institutional Review Board of Rush University Medical Center.
Consent: All study participants provided written informed consent and an Anatomical Gift Act for organ donation.
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
23 Neuropathologic data collection and assessment were performed by investigators blinded to all clinical and cognitive data, as previously described.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
CRI and ADRD Pathologies We used regression models to examine the associations of the constructed CRI with ADRD pathologies, including the presence of pathologic AD according to National Institute on Aging-Reagan criteria and associations with tau tangles and b-amyloid.	ADRD		
All analyses were carried out with SAS software (SAS Institute Inc, Cary, NC).	SAS Institute		Suggestion: Statistical Analysis System, RRID:SCR_008567(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
