Document Identifier: **PMC8968163**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Euthanasia Agents: 2.7 Histological analysis After measuring the body weights of both WT and Axdnd1 -- mice (8-12 weeks old), they were euthanized by cervical dislocation.
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
In order to fix the mutation in the strain, the F0 founder was mated with wild type mice (WT), and the resulting F1 heterozygous male and female mice were crossed to obtain an F2 generation containing homozygous mutants.
Subject Demographics
Age: From tissues (8-12 weeks old mice), proteins were extracted using RIPA buffer containing 1 protease inhibitor (Nacalai Tesque, 25955) and the concentration was measured using the BCA method.
Randomization
The samples were examined under a fluorescence microscope (Keyence BZ-X710) using 25 randomly chosen seminiferous tubules sections.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Antibodies			
2.3 Preparation of antibodies against AXDND1 An antibody against AXDND1 was prepared using a recombinant protein as outlined previously.	AXDND1		
After washing twice with TBS-T for 5 min each, they were further incubated with anti-rabbit HRP-conjugated antibody (1:2000 Promega W4011) for 2 h at RT, followed by the addition of HRP substrate.	anti-rabbit		
Afterward, the slides were incubated with primary antibodies overnight at 4degC at the following dilution: a-tubulin (Santa Cruz Biotechnology, sc-32293: 1:100).	a-tubulin (Santa Cruz Biotechnology,		
Experimental Models: Organisms/Strains			
2 MATERIALS AND METHODS 2.1 Animals C57BL6N mice were purchased from SLC and maintained under a 12-h lightdark cycle.	C57BL6N		
(C) DNA sequence of Axdnd1 -- mice.	Axdnd1 --		
Recombinant DNA			
20 The partial cDNA sequence of AXDND1(CCDS83611.1) corresponding to 958-1111 aa was amplified by PCR, inserted into the His-tagged pCold-pros2 vector (Takara Bio), and transformed into DH5a competent E. coli (Takara Bio).	pCold-pros2		
Software and Algorithms			
InterPro database predicted axonemal dynein light chain domain in 209-367 aa.	InterPro		
2.10 Statistical analysis The unpaired Students t-test (GraphPad Prism 9 GraphPad Software) was performed for comparison with the WT group.	GraphPad		Suggestion: GraphPad Prism, RRID:SCR_002798(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
2.10 Statistical analysis The unpaired Students t-test (GraphPad Prism 9 GraphPad Software) was performed for comparison with the WT group.	Students t-test
Oligonucleotides	
21 Briefly, crRNA was designed with the following sequence: TGTCCATCACGTTGCTCAACTGG (underlined PAM sequence) to target exon 7 of the Axdnd1 allele because the InterPro database predicted the presence of axonemal dynein light chain domain at position 209-367 that appeared to be important for protein function (Figure 1B).	TGTCCATCACGTTGCTCAACTGG

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
