SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IACUC: All studies involving mice were approved by the Boston University Institutional Animal Care and Use Committee.
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: Three biological replicate experiments, in each case involving the analysis of 3.08 x 105 to 1.80 x 106 MKs obtained after culture of cells from the BM obtained from the hind limbs of three to five mice, age 12 to 16 weeks, were performed at approximately 4-month intervals no technical replicate was acquired for the mass spectrometric data due to the limited amount of these samples, and the resulting very small pools of integrins isolated from the mouse MKs.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
The second and third replicates were analyzed using an Acquity M-Class UPLC (Waters) system coupled to a TriVersa NanoMate ion source mounted on a Fusion Lumos Tribrid Orbitrap mass spectrometer (ThermoFisher).

Cell Line Authentication
not detected.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Antibodies			
Complexes containing integrins a2 and b1 were recovered from lysed cell pellets by co-immunoprecipitation (co-IP) using 1 mg of CD49b (integrin a2) monoclonal antibody (HMa2, eBioscience) for 50 mg of lysate.	HMa2		
Integrin b1 was characterized in 110 of the co-IP eluate by Western blot using a 1:2000 solution of mouse anti-CD29 (integrin b1, BD Biosciences) and a 1:4000 solution of anti-mouse IgG HRP-linked (Cell Signaling Technology) as primary and secondary antibody, respectively.	anti-CD29		
	anti-mouse IgG		
Experimental Models: Cell Lines			
Recombinant mouse integrin a2b1 protein expressed in CHO cells (R&D Systems) was used as a mass spectrometry standard.	CHO		
Experimental Models: Organisms/Strains			
JAK2V617F Transgenic Mice Vav1-hJAK2V617F (JAK2V617F) mice were gift from Dr Zhizhuang Joe Zhao (University of Oklahoma).	JAK2V617F		
In addition to HCD, electron-transferhigher-energy collision-induced dissociation (EThcD) MSMS spectra of integrins a2 and b1 obtained from recombinant mouse integrin a2b1 protein (R&D Systems) were collected.	b1		
Software and Algorithms			
Glycopeptiform identification result files were combined manually (only upper and lower 100-150 kDa were used for integrin a2), Log2-fold change (FC) values were calculated using Excel spreadsheets, and the mean of relative integrated areas for glycopeptiforms was calculated using Prism GraphPad software.	Excel		
	Prism GraphPad		
Acquisition of EThcD data was triggered by the detection of at least two glycan oxonium ions in MSMS spectra generated by HCD (35 normalized collision energy).	MSMS		Suggestion: MSMS (RRID:SCR_003532)(link)

Protein search results were filtered with a -10 logP minimum score of 20 and two unique peptides peptide search results were filtered at 0.1 FDR.	Protein		
For each LC-MSMS run, data were searched against the UniProt protein database for M. musculus (54,424 validated proteins, May 2019) and sequences for mouse integrins a2 and b1 in three separate searches.	UniProt		

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
