SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: Ethical statement The informed consent form was signed by each patient before the study beginning.
IACUC: The study protocol was considered by the Local Institutional Ethical Committee and the permission was granted (Protocol 2 dated October 25, 2018).
Inclusion and Exclusion Criteria
not detected.
Attrition
In the study group , 41 patients with an initial diagnosis of GD were diagnosed with the transition to the state of HT .
Sex as a biological variable
not detected.
Subject Demographics
Age: Materials and methods Study design This was a cross-sectional study that comprised data on 398 patients with GD and HT with mean age 47.18 +- 14.99 years.
Randomization
Patients The study participants were enrolled randomly , from the list of patients followed due to GD and HT by all endocrinologists at outpatient care settings .
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Antibodies			
Testing specificity of epitopes recognized by anti-TPO Epitopes in TAID (GD and HT) and binding constants of TPO with monoclonal antibodies (MAbs) were studied in the laboratory of immunoendocrinology of Mechnikovs Scientific Institute for Vaccines and Sera , Moscow , Russian Federation .	anti-TPO		
Software and Algorithms			
All statistical tests were carried-out in SPSS 20 statistical software.	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Mann-Whitney U test was used to compare the quantitative variables, while Pearsons chi-squared test was used to compare the qualitative variables.	Mann-Whitney U test
	chi-squared test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
