SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Euthanasia Agents: On the day of the experiment or upon completion of all experiments, mice were killed by CO2 inhalation or cervical dislocation.
IACUC: All animal experiments were conducted in accordance with the Guide for the Care and Use of Laboratory Animals and were approved by the Institutional Committee of Laboratory Animal Experimentation of the University of Yamanashi (reference number: A29-24), which followed the ARRIVE guidelines
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
Materials and Methods Animals Female and male ICR mice were obtained from SLC Inc. (Hamamatsu, Japan) and bred in our mouse facility.
Subject Demographics
Age: Mice at 8-10 weeks of age were employed for the study.
Randomization
Thereafter, some randomly selected embryos were transferred to day 0.5 pseudopregnant mice that had been mated with vasectomized males the night prior to the transfer 16.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Survival and developmental rates were evaluated using the Tukey-Kramer test .	Tukey-Kramer test
Offspring and implant rates were evaluated using the chi-squared test .	chi-squared test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
