Document Identifier: **PMC8982832**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
not required.
Attrition
not required.
Sex as a biological variable
not required.
Subject Demographics
Age: not required.
Weight: not required.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
Responses were exported via tables, and duplicates were removed the results were then graphed in Jupyter Notebook (version 6.1.1) 11 using Python3 12 , matplotlib 13 , numpy 14 , pandas 15 , and seaborn 16 libraries or Microsoft Excel (2016 and 2021).

Number: Responses were exported via tables, and duplicates were removed the results were then graphed in Jupyter Notebook (version 6.1.1) 11 using Python3 12 , matplotlib 13 , numpy 14 , pandas 15 , and seaborn 16 libraries or Microsoft Excel (2016 and 2021).

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Methods The 2020 BioImage analysis questionnaire was developed using Google Forms and was distributed in the bioimage community around the world using the image.sc forum, microforum, twitter, as well as confocal, imagej, and BioImaging North America (BINA) listservs.	imagej		Suggestion: ImageJ (RRID:SCR_003070)(link)
Responses were exported via tables, and duplicates were removed the results were then graphed in Jupyter Notebook (version 6.1.1) 11 using Python3 12 , matplotlib 13 , numpy 14 , pandas 15 , and seaborn 16 libraries or Microsoft Excel (2016 and 2021).	Python3		
	matplotlib		Suggestion: Matplotlib (RRID:SCR_008624)(link)
To analyze the short and long answer survey questions, the answers to a specific question were parsed with a Python (3.7) script using PyCharm (2019.3) to find the number of words used in the answers, excluding some commonly used words such as: I, that, in, or, of, at.	Python		Suggestion: python-bx (RRID:SCR_024202)(link)
The corresponding figure was then created based on the counts and tags using Microsoft Excel.	Microsoft Excel		Suggestion: Microsoft Excel, RRID:SCR_016137(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
