SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IACUC: MATERIALS AND METHODS Animal experiments All protocols were carried out in accordance with institutional guidelines for animal care dictated by the Medical College of Wisconsin Animal Care and Use Committee (protocol approval number AUA2430).
Euthanasia Agents: Mice were euthanized by CO2 asphyxiation.
Inclusion and Exclusion Criteria
not detected.
Attrition
Finally, a table with 5,432 OTUs and 39 subjects was exported in biom data format.
Sex as a biological variable
Four-to-six-week-old Apc Min/+ mice, both sexes, were fed either the control diet or a control diet supplemented with 5% BRBs, 500 ppm PCA, or 1,000 ppm PCA for 8 weeks.
Subject Demographics
Age: Eight-week-old breeding pairs of Apc Min/+ mice were purchased from the Jackson Laboratory (Bar Harbor, ME, USA).
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
