SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: Due to its retrospective design, the requirement of written informed consent was waived. 2. Clinical Data From December 2018 to January 2021, 7 patients received a lateral mass prosthetic implant at Department of Neurosurgery, Xuanwu Hospital, including 2 patients with axial tumors and 5 patients with dumbbell tumors of the subaxial cervical spine, one of whom had vertebral body involvement.
Inclusion and Exclusion Criteria
not detected.
Attrition
Due to its retrospective design, the requirement of written informed consent was waived. 2. Clinical Data From December 2018 to January 2021, 7 patients received a lateral mass prosthetic implant at Department of Neurosurgery, Xuanwu Hospital, including 2 patients with axial tumors and 5 patients with dumbbell tumors of the subaxial cervical spine, one of whom had vertebral body involvement.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication

not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Based on preoperative imaging data evaluation, the range of bone structures to be excised (lateral mass resection or total en bloc spondylectomy) was considered prior to designing the corresponding lateral mass and the anterior column prosthesis. 3. Prosthesis Design 1) Data and software Patients CT data were obtained, and Mimics software (ver. 21.0, Materialize HQ Technologielaan, Leuven, Belgium) was used for modeling to generate Standard Triangle Language files, which were then imported into 3-matic software (ver. 13.0, Materialize HQ Technologielaan) for prosthesis design 11. 2) Axial anterior column prosthesis The prosthesis was designed to be in direct contact with both the endplate of the C3 vertebral body and the articular surface of the inferior facet of C1.	Mimics		Suggestion: Mimics (RRID:SCR_012153)(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
