Document Identifier: **PMC8987557**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Ethical Consideration The Institutional Review Board of Helsinki University Hospital approved the data collection and study design (HUS/190/2021).
Consent: According to Finnish legislation, obtaining informed consent from the patients was waived.
Inclusion and Exclusion Criteria
Patients with a comorbidity that prevented walking preoperatively were excluded. 3. Meningioma Characteristics Magnetic resonance images were reviewed by 2 study authors (VV, RH).
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: Study Cohort Eighteen-year-old and older spinal meningioma patients, operated on between January 2010 and September 2020, were retrospectively identified from electronic health records.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
