Document Identifier: **PMC8987685**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: The participants gave their written informed consent before being included.
IRB: This survey was approved by Institutional Review Boards at the University of North Carolina , Chapel Hill (Chapel Hill , NC) , and the National Institute of Nutrition and Food Safety , China Center for Disease Control and Prevention (Beijing , China) , and each participant provided written informed consent .
Inclusion and Exclusion Criteria
Participants with a history of myocardial infarction (MI) or stroke were excluded.
Attrition
not detected.
Sex as a biological variable
IO was defined as a FET concentration >300 mgL for adult men and >200 mgL for adult women 25 .
Subject Demographics
Age: We defined people of >19 years old as adult , according to the World Health Organization (WHO) age group definition 17 .
Randomization
A multistage , random cluster process was used to draw the samples surveyed in each of the provinces .
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.
Data Information

Availability: Further details of the study population , survey design , sample , data collection , and quality control procedures are available at http:content . digital.nhs . uknpid and https:www.cpc.unc.eduprojectschina.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Statistical analysis Continuous variables are expressed as mean+-standard deviation or median (interquartile range) and differences between participants with and without IO were identified using the unpaired t-test or the Kruskal-Wallis test.	t-test
	Kruskal-Wallis test
Categorical variables are expressed as percentages and data were compared using Fishers exact test.	Fishers exact test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
