SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
not required.
Attrition
Two processes were tested to decrease the time of extraction and save production costs .
Sex as a biological variable
not required.
Subject Demographics
Age: not required.
Weight: not required.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
Each sample was injected in duplicate.
Number: Each sample was injected in duplicate.
Data Information

Identifiers: These were supplemented with nutrients , such as 3 gl (NH4)2SO4 (Sigma , St . Louis , USA) , 3 gl K2HPO4 (Sigma , Steinheim , Germany) , 1 gl MgSO4 , 5 gl yeast extract , 3.5 gl peptone.	K2HPO4

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Created with BioRender.com. 2.1 Extractives fractioning Extractives were separated from the two GS materials (red and white) owing to their solubility in water or neutral organic solvents following the protocols described in National Renewable Energy Laboratory (NRELTP-510-42619	BioRender		Suggestion: Biorender (RRID:SCR_018361)(link)
These were supplemented with nutrients , such as 3 gl (NH4)2SO4 (Sigma , St . Louis , USA) , 3 gl K2HPO4 (Sigma , Steinheim , Germany) , 1 gl MgSO4 , 5 gl yeast extract , 3.5 gl peptone.	Sigma		Suggestion: sigma-tau (RRID:SCR_000488)(link)
y = Amount o f e t h a n o l p r o d u c e d Amount o f s u g a r c o n s u m e d x 0.511 x 100 where the amount of ethanol produced is the amount of product (gL of ethanol) produced, amount of sugar consumed is the amount of substrate (gL of sugars) consumed and 0.511 is the conversion factor of glucose or xylose to ethanol. 2.9 Statistics Each trial was run in triplicate and values are reported as mean +- SD. IBM SPSS(r) 19.0 (SPSS, Chicago, IL, USA) software for Windows was used to perform statistical analysis of variance (ANOVA) followed by Tukeys post hoc test (for means discrimination) to evaluate the significance of dilute acid hydrolysis and T-test was used to perform statistical analysis to evaluate the significance of ex-red and ex-white.	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

	ANOVA
	Tukeys post hoc test
	T-test
Variance homogeneity was confirmed according to Levenes test.	Levenes test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
