SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Materials and Methods An institutional review board-approved survey was prospectively administered to 100 consecutive patients who underwent a predetermined selection of soft tissue hand procedures performed by a single orthopedic hand surgeon at a Level I academic institution over 5 months from September 2018 to January 2019.
Inclusion and Exclusion Criteria
Exclusion criteria included age less than 18 years, history of substance abuse, current prescription for opioids within 30 days of surgery, non-tier 1 procedures, procedures in which the index surgery during the study period was a revision surgery, and bilateral procedures.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: Exclusion criteria included age less than 18 years, history of substance abuse, current prescription for opioids within 30 days of surgery, non-tier 1 procedures, procedures in which the index surgery during the study period was a revision surgery, and bilateral procedures.
Randomization
not detected.
Blinding
not detected.
Power Analysis
The current sample size has 80 power to detect a mean VAS distribution across 3 groups of 1.0, 2.0, and 2.5 with an SD of 2.
Replication

not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
We used Kruskal-Wallis test to test differences in pain scores owing to the non-normal distribution of the VAS pain score, and chi-square tests for patient satisfaction on the Likert scale.	Kruskal-Wallis test
	chi-square tests

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
