SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
Criteria for dropping items at each round If 80% or more of the participants' votes completely disagree or disagreed, the item was excluded from the instrument.
Attrition
not required.
Sex as a biological variable
not required.
Subject Demographics
Age: not required.
Weight: not required.
Randomization
Random sampling The random sample was performed with the Microsoft Excel software in a central computer considering some stratifications (eg, type of professional, geography, settings).
Blinding
25 26 The Delphi technique was conducted in online web surveys where the panel of experts filled out the form given their responses directly and blinded from others.26 Selection and recruitment of experts The panellists were identified through an advanced search system of the Lattes platform on the National Council for Scientific and Technological Development website (www.cnpq.br/lattes), using the following keywords: evidence-based health, EBP, evidence-based medicine, questionnaire, measurement instruments, questionnaire validation and psychometric analysis.
Power Analysis
not detected.
Replication

not required.	
Data Information	
Identifiers: 10.1136/bmjopen-2021-052767.supp1 Supplementary data After translation, technique revision and semantic evaluation by the research group, the initial item pool was discussed and critically assessed and appropriate changes to the translation were made to ensure consistency.	10.1136/bmjopen-2021-052767.supp1

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
12–14 A scoping review was used to systematically select and summarise existing tools with established evidence on the reliability and validity.14–21 We used the CREATE framework to guide the data extraction of potential domains.	CREATE		Suggestion: CREATE (RRID:SCR_006133)(link)
The Excel spreadsheet was used to extract and analyse the items.	Excel		
Each round lasted 30 days corresponding to 15 days for the panellists' answers and another 15 days for the researchers' analysis Descriptive analyses After each round, data generated from completing the online questionnaire were extracted to Microsoft Excel for descriptive analysis (frequencies and percentages) to determine the percentage rating of agreement or disagreement among experts.	Microsoft Excel		Suggestion: Microsoft Excel, RRID:SCR_016137(link)
Data analysis Data analysis were performed using SPSS (V.20.0) and Stata (V.12.0).	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
