SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: The local ethics committee approved the study.
Consent: All participants were informed about the procedure of the study and provided informed consent.
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
Methods Participants and procedure In the current study, 146 participants (67 male, 79 female) aged between 18 and 38 years (M = 23.95, SD = 3.78) took part.
Subject Demographics
Age: Methods Participants and procedure In the current study, 146 participants (67 male, 79 female) aged between 18 and 38 years (M = 23.95, SD = 3.78) took part.
Randomization
The participants were randomly assigned to one of two conditions of the IGT.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Statistical analyses Statistical analyses were carried out with SPSS 26.0 (IBM statistics).	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
T-tests for independent samples were used to analyze group differences regarding age and overall decision-making performance.	T-tests
In addition, mixed ANOVAs with Greenhouse Geisser correction were used to analyze within-subject changes in craving experiences (baseline, post, control craving) or in decision-making performance (five blocks of the IGT) under consideration of the IGT condition (between-subjects factor).	ANOVAs

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
